

CLAIMS

1. A packaging material comprising a laminate having at least a sealant layer laminated on a substrate film layer via an adhesive layer, being characterized in that the adhesive layer contains a colorant.
2. The packaging material according to claim 1, wherein the laminate further comprises a white coating layer between the substrate film and the sealant layer.
3. The packaging material according to claim 2, wherein the adhesive layer containing a colorant is formed in contact with the white coating layer.
4. The packaging material according to any one of claims 1 to 3, wherein the laminate further comprises a deposited layer between the substrate film and the sealant layer.
5. The packaging material according to any one of claims 1 to 4, wherein the laminate further comprises an intermediate layer between the substrate film and the sealant layer.
6. The packaging material according to any one of claims 2 to 5, wherein the white coating layer has a weight of 8 to 15 g/m².
7. The packaging material according to any one of claims 3 to 6, wherein the deposited layer is an aluminum oxide-deposited or silicon oxide-deposited plastic film.
8. The packaging material according to any one of claims 3 to 6, wherein the deposited layer is an aluminum oxide-deposited or silicon oxide-deposited polyethylene terephthalate film.

9. The packaging material according to any one of claims 1 to 8, wherein the laminate comprises a white coating layer, the adhesive layer containing a colorant, a deposited layer composed of an aluminum-deposited polyethylene terephthalate film, an adhesive layer, a intermediate layer composed of oriented polyamide film, an adhesive layer, and the sealant layer composed of a cast polypropylene film, which are laminated on the substrate film layer composed of polyethylene terephthalate in this order.
